A SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

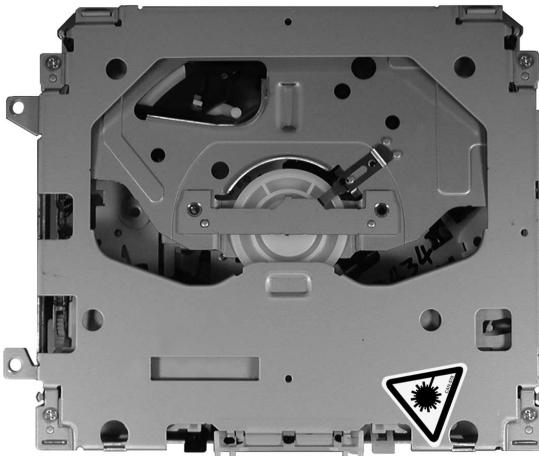

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

B 1. Safety Precautions for those who Service this Unit.

- When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

C Caution:

- During repair or tests, minimum distance of 13cm from the focus lens must be kept.
 - During repair or tests, do not view laser beam for 10 seconds or longer.
-
- A "CLASS 1 LASER PRODUCT" label is affixed to the bottom of the player.
 - The triangular label is attached to the mechanism unit frame.

D 4. Specifications of Laser Diode

Specifications of laser radiation fields to which human access is possible during service.
Wavelength = 800 nanometers

[Important symbols for good services]

In this manual, the symbols shown below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

E ● CD Player Service Precautions

1. Before disassembling the unit, be sure to turn off the power. Unplugging and plugging the connectors during power-on mode may damage the ICs inside the unit.
2. To protect the pickup unit from electrostatic discharge during servicing, take an appropriate treatment(shorting-solder) by referring to "the DISASSEMBLY" on page 47.
3. After replacing the pickup unit, be sure to check the grating.(See p.44.)
4. In this product, because the memory capacity of the microcomputer is insufficient, the test mode is not installed. However grating of the pickup unit can be confirmed.

2. EXPLODED VIEWS AND PARTS LIST

2.1 PACKING(EW model)

NOTE:

- Parts marked by “*” are generally unavailable because they are not in our Master Spare Parts List.
- Screws adjacent to ∇ mark on the product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual.
(In the case of no amount instructions, apply as you think it appropriate.)

6. ADJUSTMENT

6.1 CD ADJUSTMENT

1) Cautions on adjustments

- In this product the single voltage (3.3V) is used for the regulator. The reference voltage is the REFO1 (1.65V) instead of the GND.
If you should mistakenly short the REFO1 with the GND during adjustment, accurate voltage will not be obtained, and the servo's misoperation will apply excessive shock to the pickup. To avoid such problems:
 - a. Do not mix up the REFO1 with the GND when connecting the (-) probe of measuring instruments. Especially on an oscilloscope, avoid connecting the (-) probe for CH1 to the GND.
 - b. In many cases, measuring instruments have the same potential as that for the (-) probe. Be sure to set the measuring instruments to the floating state.
 - c. If you have mistakenly connected the REFO1 to the GND, turn off the regulator or the power immediately.

- Before mounting and removing filters or leads for adjustment, be sure to turn off the regulator.
- For stable circuit operation, keep the mechanism operating for about one minute or more after the regulator is turned on.
- In the test mode, any software protections will not work. Avoid applying any mechanical or electrical shock to the mechanism during adjustment.
- The RFI and RFO signals with a wide frequency range are easy to oscillate. When observing the signals, insert a resistor of 1k ohms in series.
- The load and eject operation is not guaranteed with the mechanism upside down. If the mechanism is blocked due to mistaken eject operation, reset the product or turn off and on the ACC to restore it.

2) Test mode

This mode is used to adjust the CD mechanism module.

- To enter the test mode.

While pressing the 4 and 6 keys at the same time, reset.

- To exit from the test mode.

Turn off the ACC and back up.

Notes:

- a. During ejection, do not press any other keys than the EJECT key until the loaded disc is ejected.
- b. If you have pressed the (→) key or (←) key during focus search, turn off the power immediately to protect the actuator from damage caused by the lens stuck.

A 6.2 CHECKING THE GRATING AFTER CHANGING THE PICKUP UNIT

- Note :**

The grating angle of the PU unit cannot be adjusted after the PU unit is changed. The PU unit in the CD mechanism module is adjusted on the production line to match the CD mechanism module and is thus the best adjusted PU unit for the CD mechanism module. Changing the PU unit is thus best considered as a last resort. However, if the PU unit must be changed, the grating should be checked using the procedure below.

- Purpose :**

To check that the grating is within an acceptable range when the PU unit is changed.

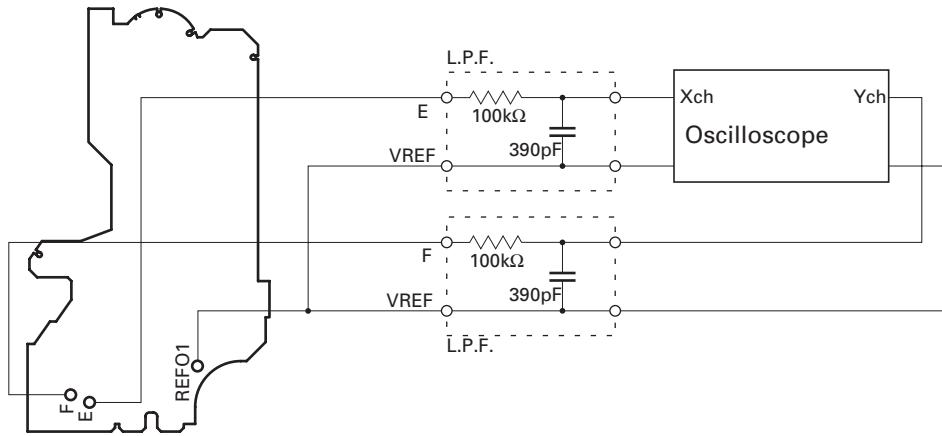

- Symptoms of Mal-adjustment :**

If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or taking a long time for track searching.

- Method :**

- Measuring Equipment
 - Oscilloscope, Two L.P.F.
- Measuring Points
 - E, F, REFO1
- Disc
 - ABEX TCD-782
- Mode
 - TEST MODE

C CD CORE UNIT(S10)

- Checking Procedure**

1. While pressing the 4 and 6 keys at the same time, reset.
2. The display will change, returning to "81" on the fourth press.
3. As shown in the diagram above, monitor the LPF outputs using the oscilloscope and check that the phase difference is within 75°. Refer to the photographs supplied to determine the phase angle.
4. If the phase difference is determined to be greater than 75° try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75° then the mechanism should be judged to be at fault.

- Note**

Because of eccentricity in the disc and a slight misalignment of the clamping center the grating waveform may be seen to "wobble" (the phase difference changes as the disc rotates). The angle specified above indicates the average angle.

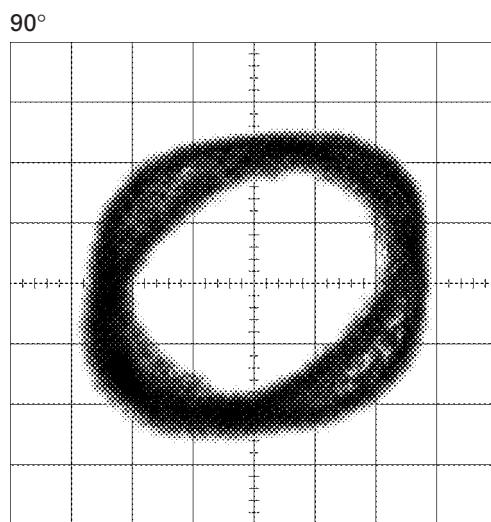

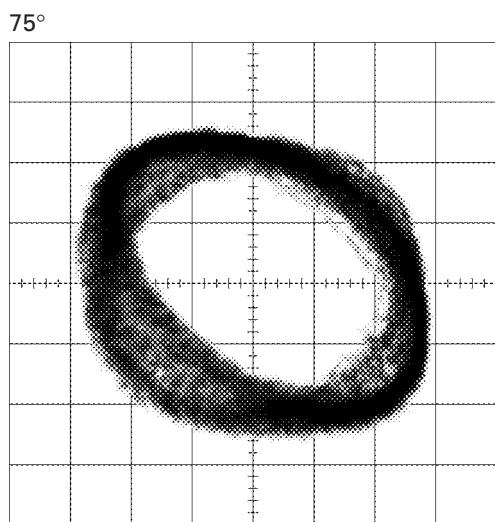

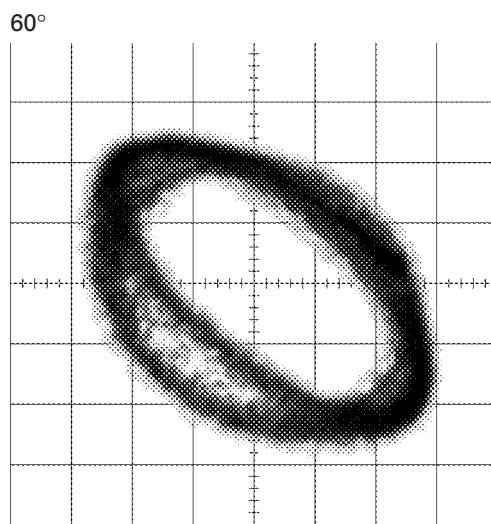

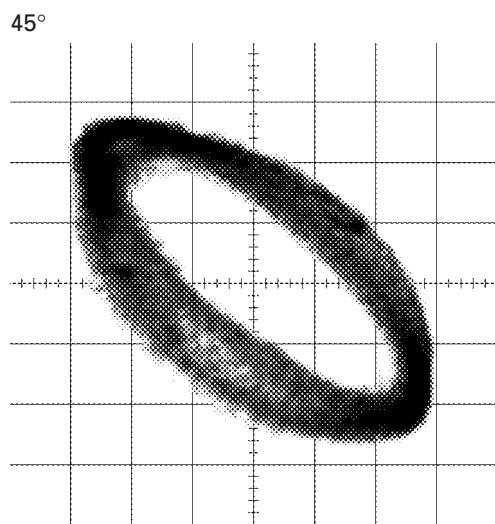

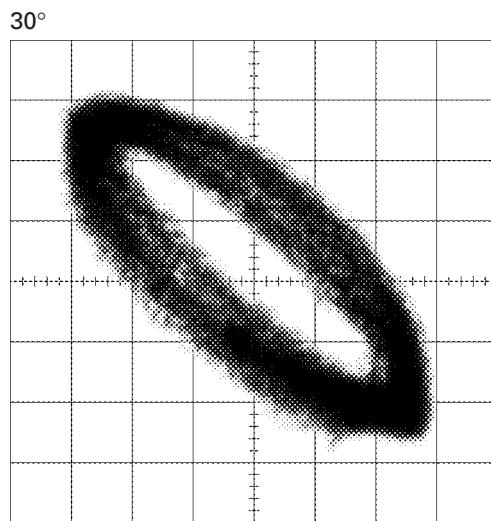

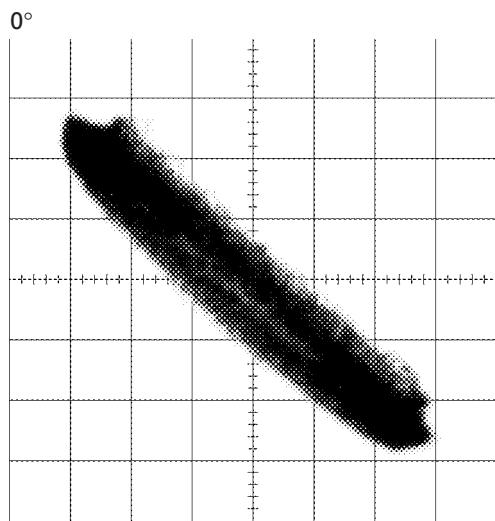

- Hint**

Reloading the disc changes the clamp position and may decrease the "wobble".

A 6.3 ERROR MODE

● Error Messages

If a CD is not operative or stopped during operation due to an error, the error mode is turned on and cause(s) of the error is indicated with a corresponding number. This arrangement is intended at reducing nonsense calls from the users and also for facilitating trouble analysis and repair work in servicing.

(1) Basic Indication Method

B 1) When SERRORM is selected for the CSMOD (CD mode area for the system), error codes are written to DMIN (minutes display area) and DSEC (seconds display area). The same data is written to DMIN and DSEC. DTNO remains in blank as before.

2) Head unit display examples

Depending on display capability of LCD used, display will vary as shown below. xx contains the error number.

(2) Error Code List

Code	Class	Displayed error code	Description of the code and potential cause(s)
10	Electricity	Carriage Home NG SERVO LSI Communication Error	CRG can't be moved to inner diameter. CRG can't be moved from inner diameter. → Failure on home switch or CRG move mechanism. Communication error between microcomputer and SERVO LSI.
11	Electricity	Focus Servo NG	Focusing not available. → Stains on rear side of disc or excessive vibrations on REWRITABLE.
12	Electricity	Spindle Lock NG Subcode NG	Spindle not locked. Sub-code is strange (not readable). → Failure on spindle, stains or damages on disc, or excessive vibrations. A disc not containing CD-R data is found. Turned over disc are found, though rarely. CD signal error.
17	Electricity	Setup NG	AGC protection doesn't work. Focus can be easily lost. → Damages or stains on disc, or excessive vibrations on REWRITABLE.
30	Electricity	Search Time Out	Failed to reach target address. → CRG tracking error or damages on disc.
44	Electricity	ALL Skip	Skip setting for all track. (CD-R/RW)
50	Mechanism	CD On Mech Error	Mechanical error during CD ON. → Defective loading motor, mechanical lock and mechanical sensor.
A0	System	Power Supply NG	Power (VD) is ground faulted. → Failure on SW transistor or power supply (failure on connector).

Remarks: Mechanical errors are not displayed (because a CD is turned off in these errors).

Unreadable TOC does not constitute an error. An intended operation continues in this case.

Upper digits of an error code are subdivided as shown below:

1x: Setup relevant errors, 3x: Search relevant errors, Ax: Other errors.

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 DISASSEMBLY

● Removing the Case (not shown)

1. Remove the Case.

● Removing the CD Mechanism Module (Fig.1)

-  1 Remove the four screws.

Disconnect the connector and then remove the CD Mechanism Module.

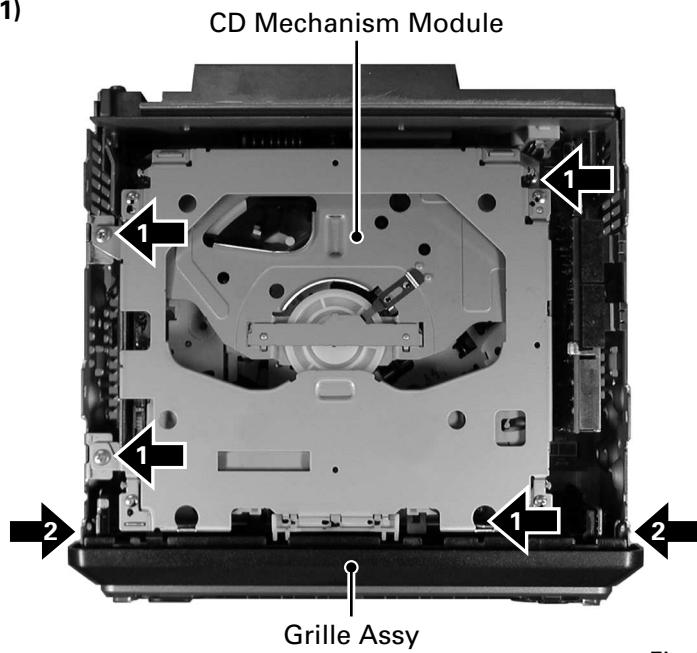

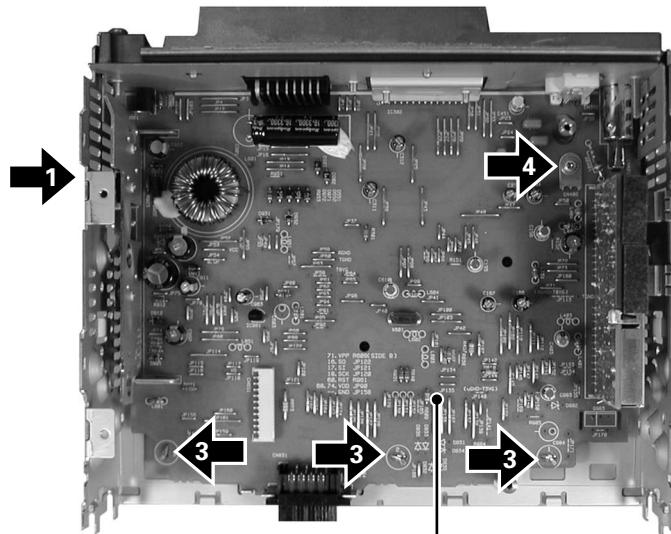

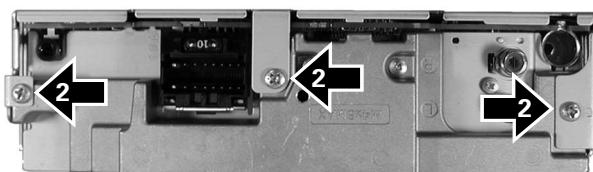

Fig.1

● Removing the Grille Assy (Fig.1)

-  2 Release the two latches and then remove the Grille Assy.

● Removing the Tuner Amp Unit (Fig.2)

-  1 Remove the screw.
-  2 Remove the three screws.
-  3 Straight the tabs at three locations indicated.
-  4 Remove the screw and then remove the Tuner Amp Unit.

Tuner Amp Unit

Fig.2

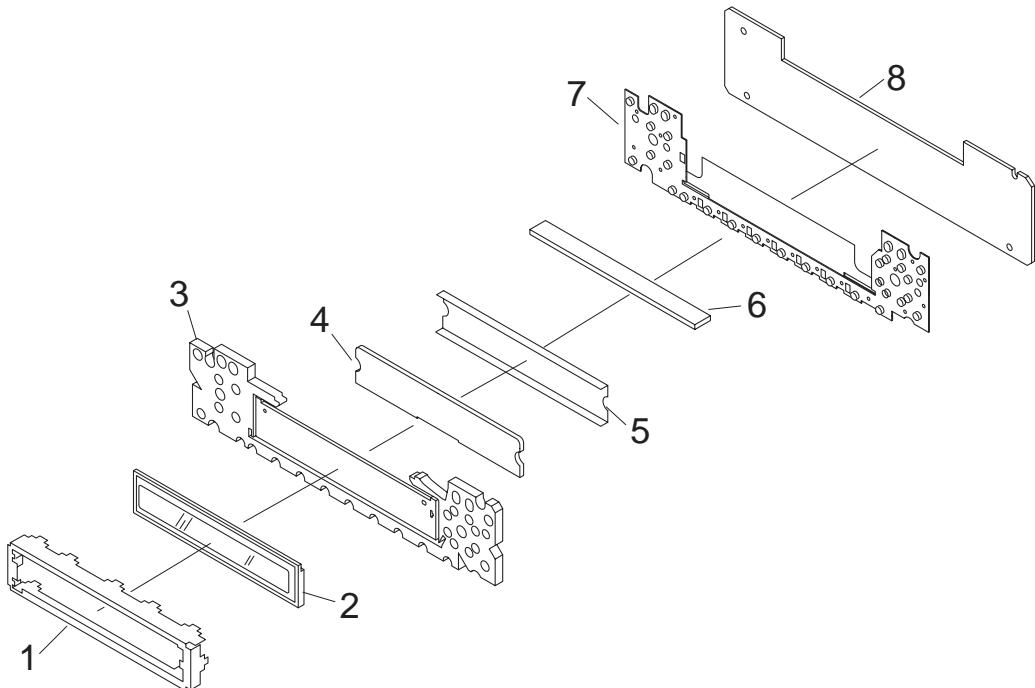

A

● How to assemble Keyboard Unit

1. Assemble them in order from "1" to "8". (See the figure below.)
2. After that, bend the crows (7 in total) until they get the right angles with the marks printed on "8".

Note) If "5" is not set correctly, defective contact may occur on "6".

To avoid this problem, hold "5" using "7" just before putting "8".

B

C

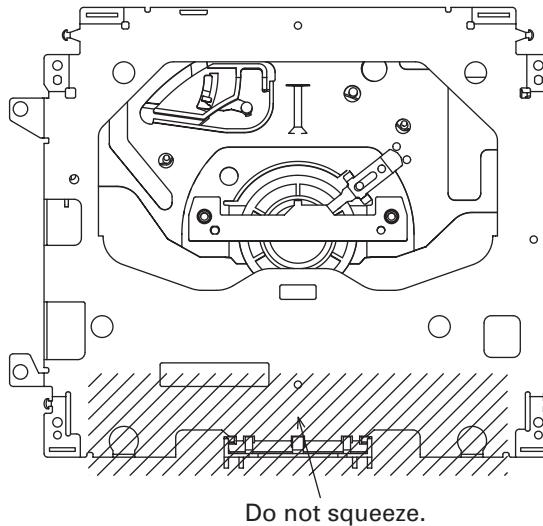

D

E

F

● How to hold the Mechanical Unit

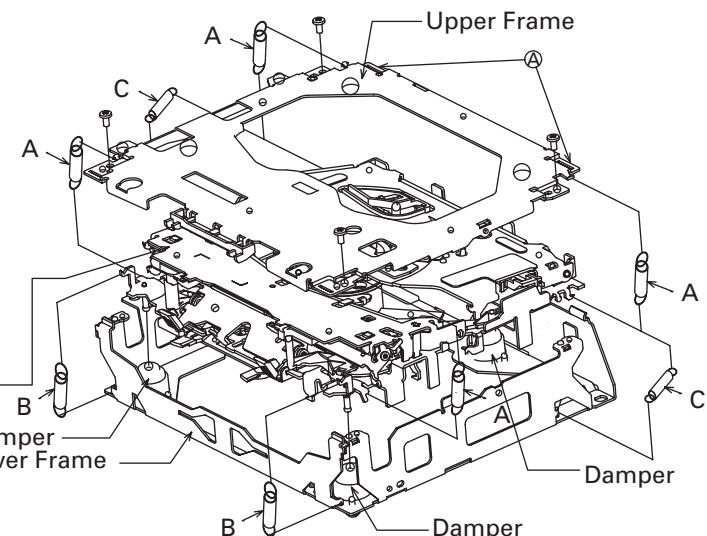

1. Hold the top and bottom frame.
2. Do not squeeze top frame's front portion too tight, because it is fragile.

● Removing the Upper and Lower Frames

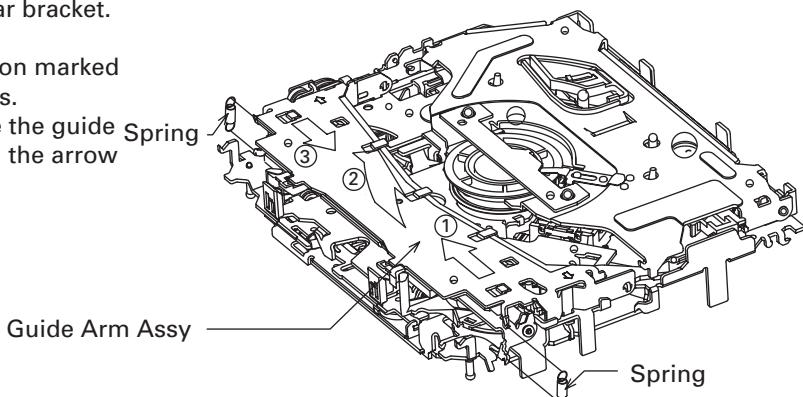

1. With a disc clamped, remove the four springs (A), the two springs (B), the two springs (C), and the four screws.
 2. To remove the upper frame, open it on the fulcrum A.
 3. While lifting the carriage mechanism, remove the three dampers.
 4. With the frames removed, insert the connectors coming from the main unit and eject the disc.
- Caution: Before installing the carriage mechanism in the frames, be sure to apply some alcohol to the dampers and set the mechanism to the clamp mode.

Carriage Mechanism

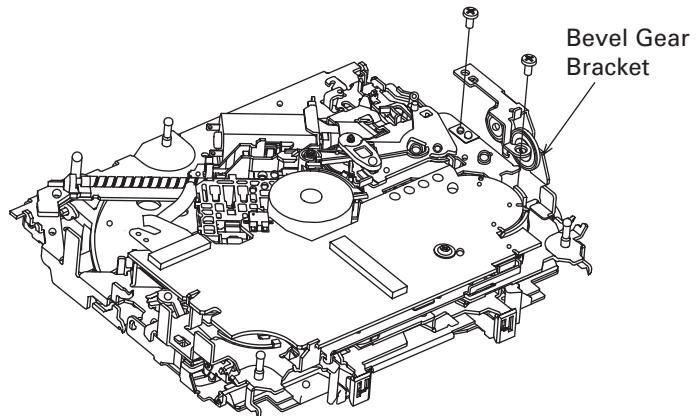

● Removing the Guide Arm Assy

1. Remove the upper and lower frames and set the mechanism to the clamp mode.
2. Remove the two springs.
3. Remove the two screws and bevel gear bracket. Note that the gears come off.
4. Slide the guide arm Assy in the direction marked with the arrow (1) and open it upwards.
5. At the angle of about 45 degrees, slide the guide Spring arm Assy in the direction marked with the arrow (3) to remove it.

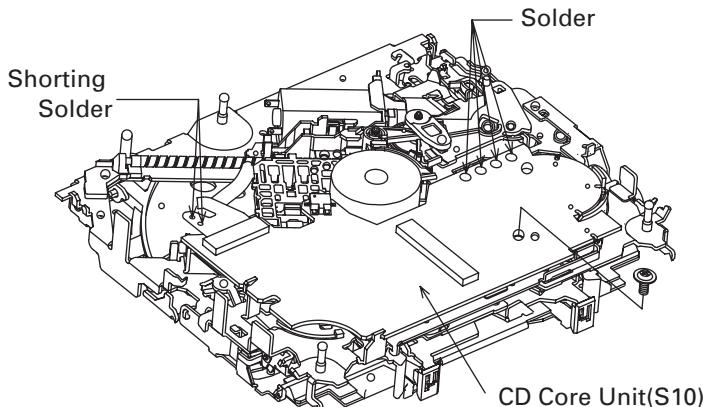

A

B

● Removing the CD Core Unit(S10)

1. Apply shorting solder to the Pickup flexible cable.
Disconnect the cable.
 2. Remove the solder from the four leads, and loosen the screw.
 3. Remove the CD core unit(S10).
- Caution:** When assembling the CD core unit(S10), set the mechanism to the clamp mode to protect the switches from any damage.

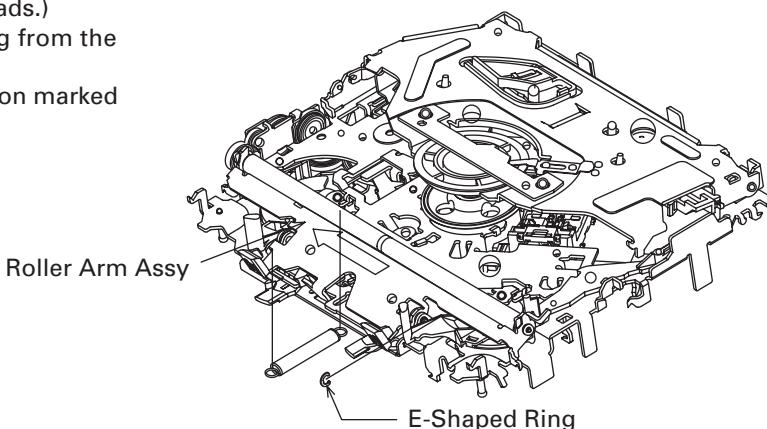

C

D

● Removing the Roller Arm Assy

1. Remove the guide arm Assy and set the mechanism to the eject mode.
2. Remove the CD core unit(S10). (You do not have to remove the solder from the four leads.)
3. Remove the spring and E-shaped ring from the fulcrum shaft.
4. Slide the roller arm Assy in the direction marked with an arrow.

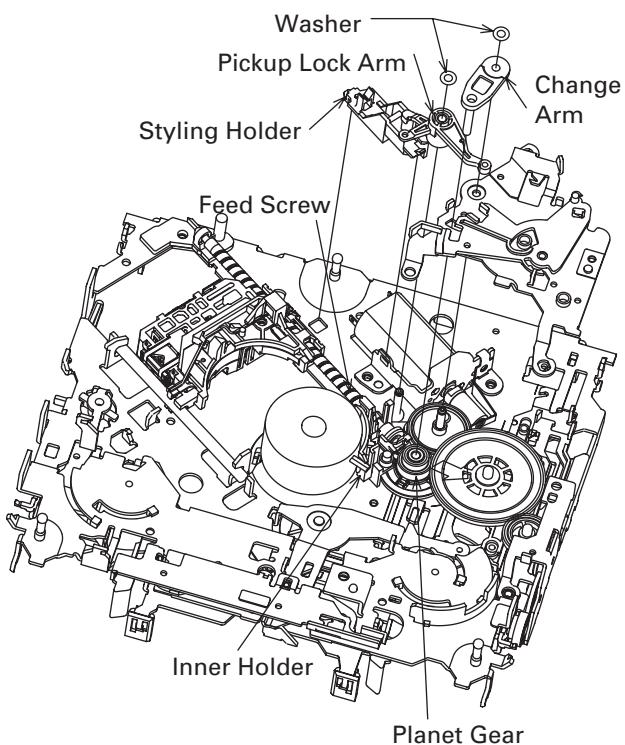

E

F

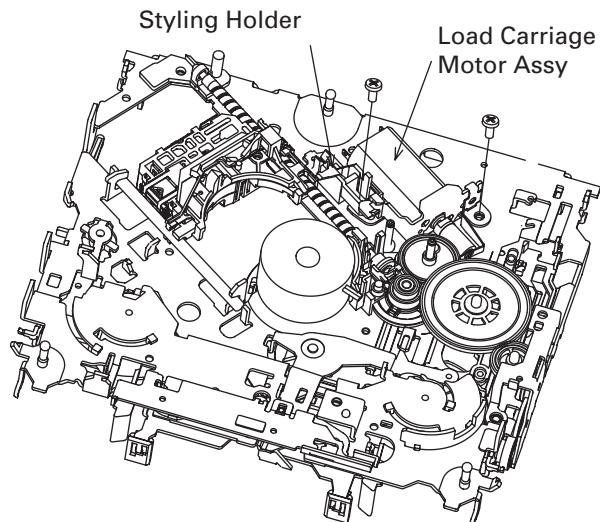

● Removing the Pickup Unit

1. Set the mechanism to the clamp mode.
 2. Remove the lead wires from the inner holder.
 3. Remove the two washers, styling holder, change arm, and pickup lock arm.
 4. While releasing from the hook of the inner holder, lift the end of the feed screw.
- Caution: In assembling, move the planet gear to the load/eject position before setting the feed screw in the inner holder.

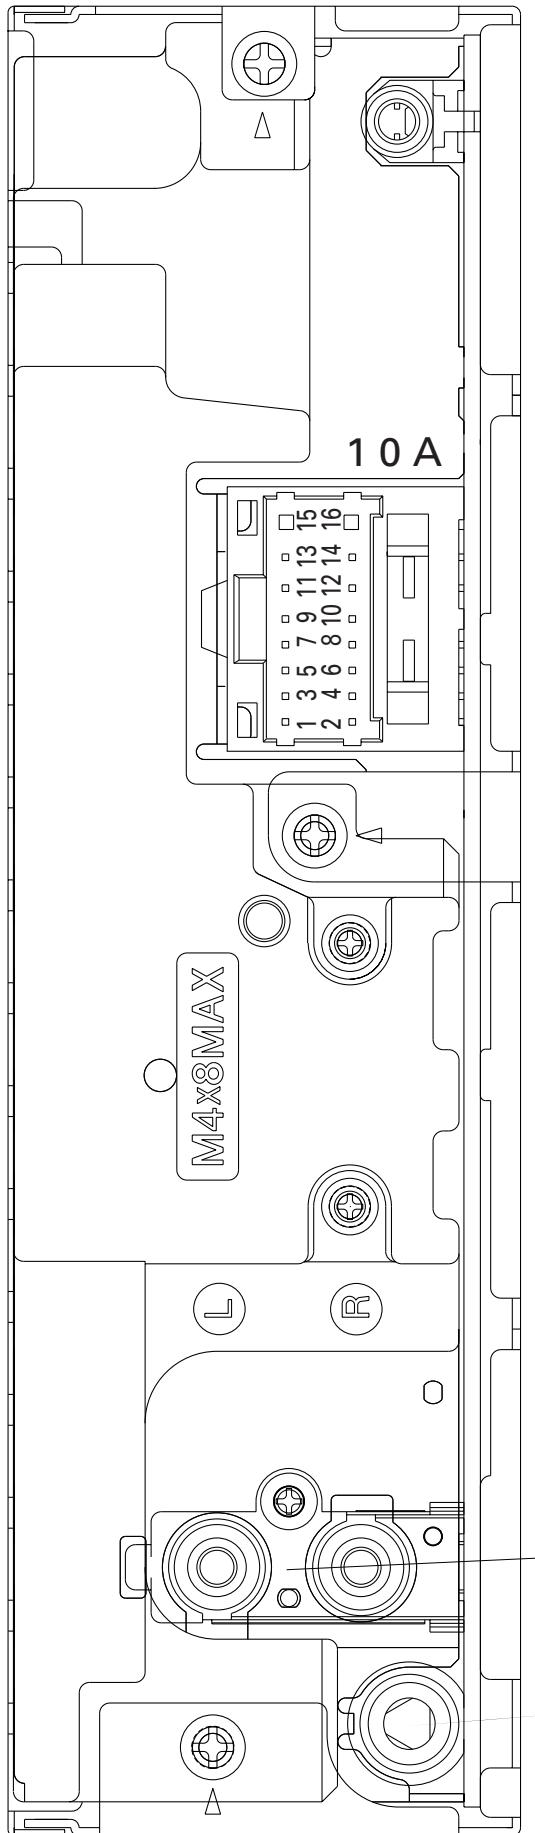

● Removing the Load Carriage Motor Assy

1. Release the leads from the styling holder and remove the holder.
2. Remove the two screws.
3. Remove the load carriage motor Assy.

Head unit

① TA button

Press to turn traffic announcements function on or off.

② EJECT button

Press to eject a CD from your built-in CD player.

③ AUDIO button

Press to select various sound quality controls.

④ ▲/▼/◀/▶ buttons

Press to do manual seek tuning, fast forward, reverse and track search controls. Also used for controlling functions.

⑤ DETACH button

Press to remove the front panel from the head unit.

⑥ BAND button

Press to select among two FM and MW/LW bands and cancel the control mode of functions.

⑦ LOUDNESS button

Press to turn loudness on or off.

⑧ LOCAL/BSM button

Press to turn local function on or off. Press and hold to turn BSM function on or off.

⑨ 1-6 buttons

Press for preset tuning.

⑩ SOURCE button

This unit is turned on by selecting a source. Press to cycle through all of the available sources.

⑪ VOLUME button

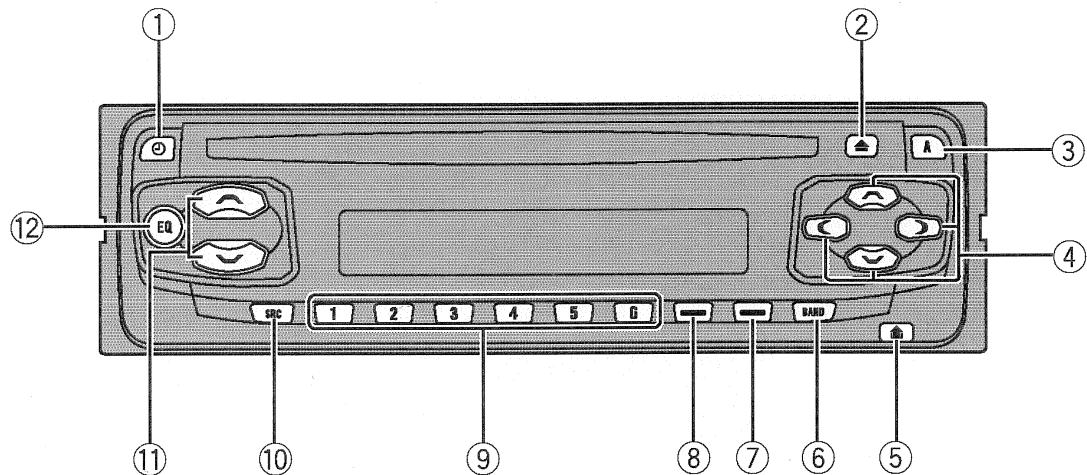

Press to increase or decrease the volume.

⑫ EQ button

Press to select various equalizer curves. □

Power ON/OFF

Turning the unit on

- Press **SOURCE** to turn the unit on.
- When you select a source the unit is turned on. 

Listening to the radio

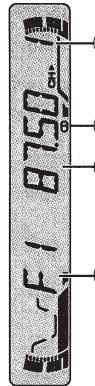

Selecting a source

You can select a source you want to listen to. To switch to the built-in CD player, load a disc in this unit.

- Press **SOURCE** to select a source.
- Press **SOURCE** repeatedly to switch between the following sources:
- Built-in CD player—Tuner**

This unit's AF (alternative frequencies search) function can be turned on and off. AF should be off for normal tuning operation.

To perform seek tuning, press and hold

◀ or ▶ for about one second and release.

The tuner will scan the frequencies until a broadcast strong enough for good reception is found.

■ You can cancel seek tuning by pressing either

◀ or ▶ with a quick press.

■ If you press and hold ▶ or ▷ you can skip broadcasting stations. Seek tuning starts as soon as you release the buttons.

When the frequency selected is being broadcast in stereo the stereo (CD) indicator will light. 

① **Band indicator**
Shows which band the radio is tuned to, MW, LW or FM.

② **Frequency indicator**
Shows to which frequency the tuner is tuned.

③ **Stereo (CD) indicator**
Shows that the frequency selected is being broadcast in stereo.

④ **Preset number indicator**
Shows what preset has been selected.

- 1 Press **SOURCE** to select the tuner.

2 Use **VOLUME** to adjust the sound level.
When you press **VOLUME** up +, the volume is raised and when pressed down -, the volume is lowered.

- 3 Press **BAND** to select a band.
- Press **BAND** until the desired band is displayed. F1, F2 for FM or **MW/LW**.

- 4 To perform manual tuning, press ▶ or ▷ with quick presses.
- The frequencies move up or down step by step.

Tuner

Turning the unit off

- Press **SOURCE** and hold until the unit turns off. 

Storing and recalling broadcast frequencies

If you press any of the preset tuning buttons 1–6 you can easily store up to six broadcast frequencies for later recall with the touch of a button.

- When you find a frequency that you want to store in memory press a preset tuning button 1–6 and hold until the preset number stops flashing.

The number you have pressed will flash in the preset number indicator and then remain lit. The selected radio station frequency has been stored in memory.

The next time you press the same preset tuning button 1–6 the radio station frequency is recalled from memory.

- Up to 12 FM stations, 6 for each of the two FM bands, and 6 MW/LW stations can be stored in memory.

DEH-1500R/XU/EW

- You can also use ▲ and ▼ to recall radio station frequencies assigned to preset tuning buttons 1–6. ☐

Storing broadcast frequencies with BSM may replace broadcast frequencies you have saved using 1–6. ☐

Tuning in strong signals

Local seek tuning lets you tune in only those radio stations with sufficiently strong signals for good reception.

1 Press LOCAL/BSM to turn local seek tuning on.

LOC appears in the display.

2 When you want to return to normal seek tuning, press LOCAL/BSM to turn local seek tuning off. ☐

Storing the strongest broadcast frequencies

BSM (best stations memory) lets you automatically store the six strongest broadcast frequencies under preset tuning buttons 1–6 and once stored there you can tune in to those frequencies with the touch of a button.

● Press LOCAL/BSM and hold until the BSM turns on.

BSM begins to flash. While BSM is flashing the six strongest broadcast frequencies will be stored under preset tuning buttons 1–6 in order of their signal strength. When finished, BSM stops flashing.

- To cancel the storage process, press LOCAL/BSM.

Playing a CD

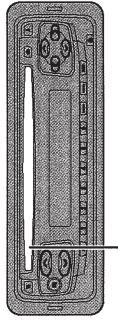

- The built-in CD player plays one, standard, 12-cm or 8-cm (single) CD at a time. Do not use an adapter when playing 8-cm CDs.
- Do not insert anything other than a CD into the CD loading slot.
- If you cannot insert a disc completely or if after you insert a disc the disc does not play, check that the label side of the disc is up. Press EJECT to eject the disc, and check the disc for damage before inserting the disc again.
- If the built-in CD player does not operate properly, an error message such as **ERROR-11** may be displayed. Refer to *Understanding built-in CD player error messages*. ☐

- ① **Track number indicator**
Shows the track currently playing.

- ② **Play time indicator**
Shows the elapsed playing time of the current track.

- 1 **Insert a CD into the CD loading slot.**
Playback will automatically start.

CD loading slot

- You can eject a CD by pressing EJECT.

- 2 After a CD has been inserted, press SOURCE to select the built-in CD player.

- 3 **Use VOLUME to adjust the sound level.**
When you press VOLUME up/+ the volume is raised and when pressed down/-, the volume is lowered.

- 4 **To perform fast forward or reverse, press and hold ▶ or ▷.**
If you perform track search or fast forward/reverse, repeat play is automatically cancelled. ☐

- 5 **To skip back or forward to another track, press ▶ or ▷.**
Pressing ▶ skips to the start of the next track. Pressing ▷ once skips to the start of the current track. Pressing again will skip to the previous track.

Tuner

- You can also use ▲ and ▼ to recall radio station frequencies assigned to preset tuning buttons 1–6. ☐

Storing broadcast frequencies with BSM may replace broadcast frequencies you have saved using 1–6. ☐

Tuning in strong signals

Local seek tuning lets you tune in only those radio stations with sufficiently strong signals for good reception.

1 Press LOCAL/BSM to turn local seek tuning on.

LOC appears in the display.

2 When you want to return to normal seek tuning, press LOCAL/BSM to turn local seek tuning off. ☐

Storing the strongest broadcast frequencies

BSM (best stations memory) lets you automatically store the six strongest broadcast frequencies under preset tuning buttons 1–6 and once stored there you can tune in to those frequencies with the touch of a button.

● Press LOCAL/BSM and hold until the BSM turns on.

BSM begins to flash. While BSM is flashing the six strongest broadcast frequencies will be stored under preset tuning buttons 1–6 in order of their signal strength. When finished, BSM stops flashing.

- To cancel the storage process, press LOCAL/BSM.

Playing a CD

- The built-in CD player plays one, standard, 12-cm or 8-cm (single) CD at a time. Do not use an adapter when playing 8-cm CDs.
- Do not insert anything other than a CD into the CD loading slot.
- If you cannot insert a disc completely or if after you insert a disc the disc does not play, check that the label side of the disc is up. Press EJECT to eject the disc, and check the disc for damage before inserting the disc again.
- If the built-in CD player does not operate properly, an error message such as **ERROR-11** may be displayed. Refer to *Understanding built-in CD player error messages*. ☐

Repeating play

Repeat play lets you hear the same track over again.

- 1 **Press 5 to turn repeat play on.**
RPT appears in the display. The track currently playing will play and then repeat.

- 2 **Press 5 to turn repeat play off.**
The track currently playing will continue to play and then play the next track.

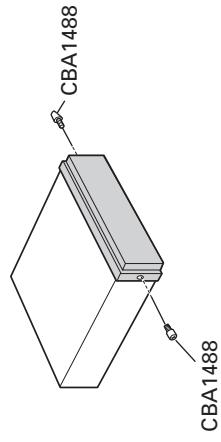

■ If you perform track search or fast forward/reverse, repeat play is automatically cancelled. ☐

Pausing CD playback

Pause lets you temporarily stop playback of the CD.

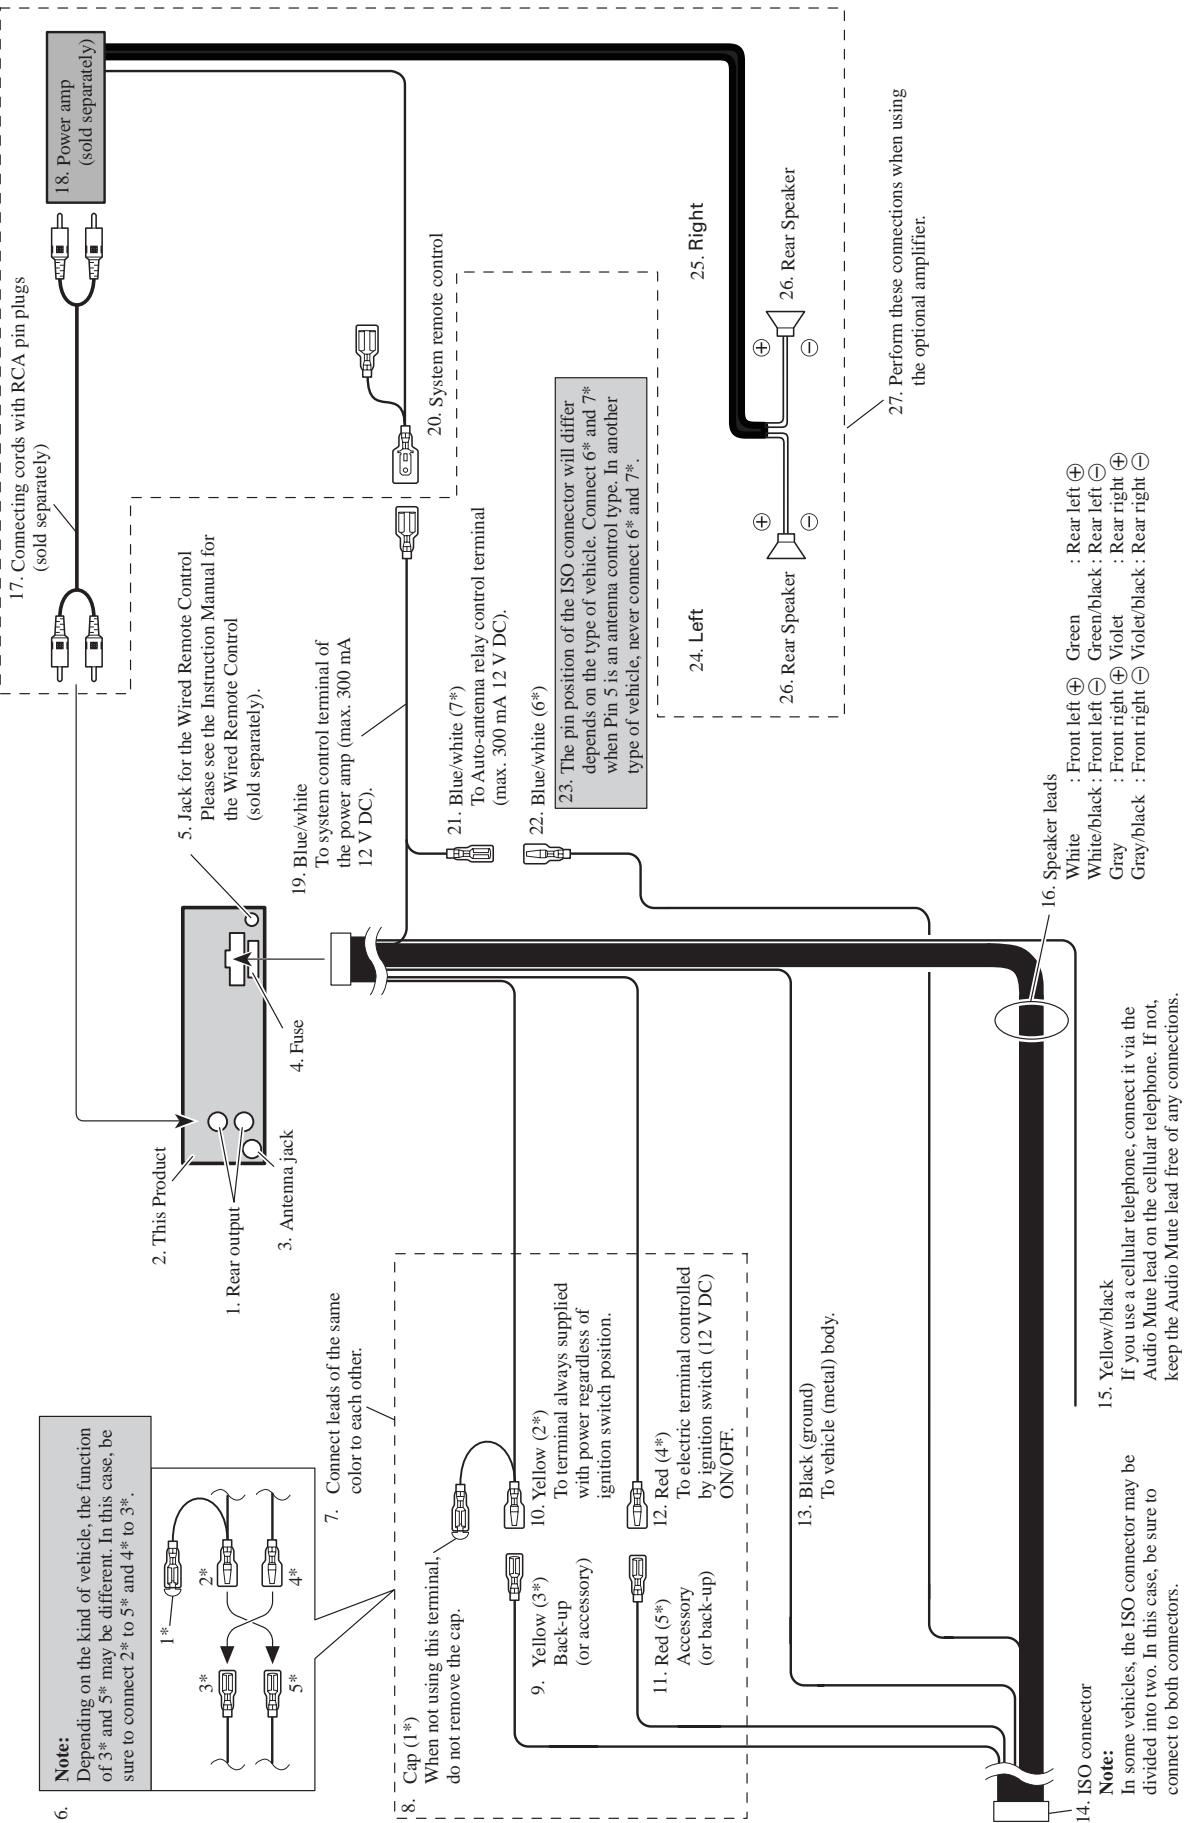

Built-in CD Player

About the fixing screws for the front panel.

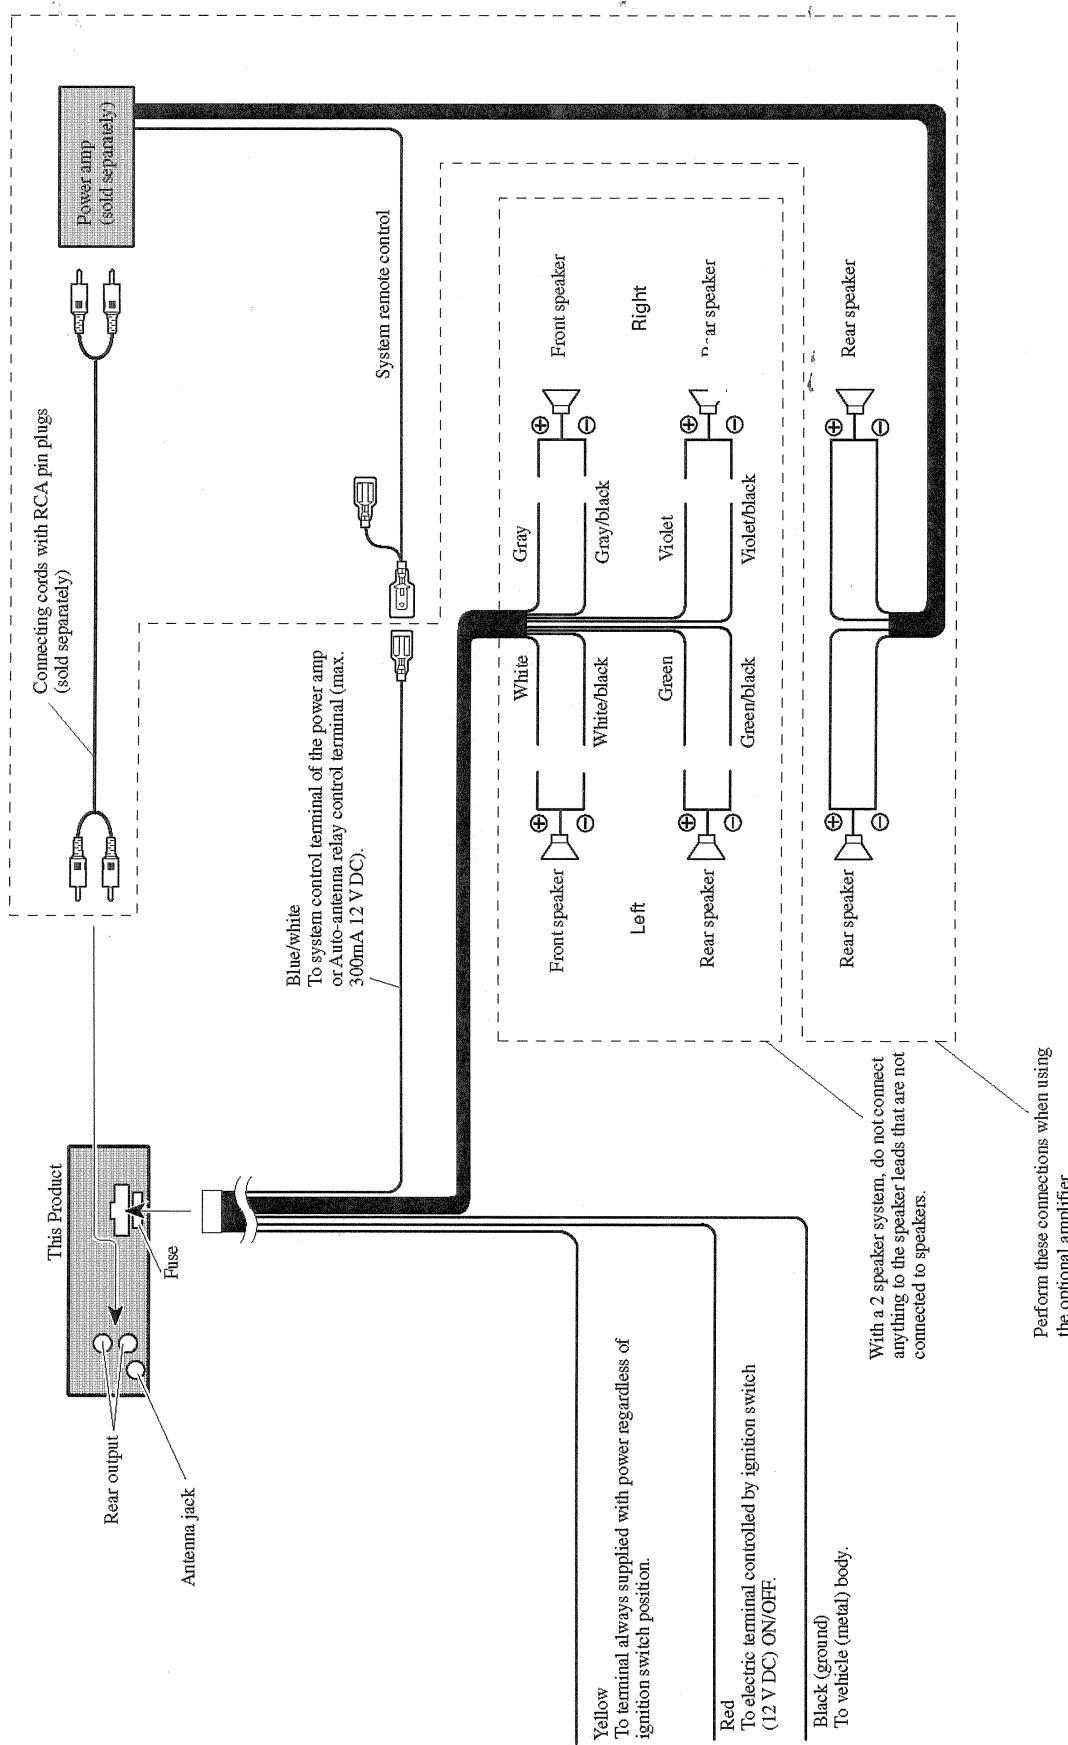

- 1 Press 6 to turn pause on.**
PAUSE appears in the display. Play of the current track pauses.
- 2 Press 6 to turn pause off.**
Play will resume at the same point that you turned pause on.
