

MC34063AB - MC34063AC MC34063EB - MC34063EC

DC/DC converter control circuits

Features

- Output switch current in excess of 1.5 A
- 2 % reference accuracy
- Low quiescent current: 2.5 mA (typ.)
- Operating from 3 V to 40 V
- Frequency operation to 100 kHz
- Active current limiting

Description

The MC34063A/E series is a monolithic control circuit delivering the main functions for DC/DC voltage converting.

The device contains an internal temperature compensated reference, comparator, duty cycle controlled oscillator with an active current limit circuit, driver and high current output switch. Output voltage is adjustable through two external resistors with a 2 % reference accuracy.

Employing a minimum number of external components the MC34063A/E devices series is

designed for step-down, step-up and voltage-inverting applications.

			for MC34063E		1.5		

Note: 1 Maximum package power dissipation limit must be observed.

2 $T_{LOW} = 0^\circ\text{C}$, $T_{HIGH} = 70^\circ\text{C}$ (AC and EC series); $T_{LOW} = -40^\circ\text{C}$, $T_{HIGH} = 85^\circ\text{C}$ (AB series); $T_{LOW} = -40^\circ\text{C}$, $T_{HIGH} = 125^\circ\text{C}$ (EB series).

3 If darlington configuration is not used, care must be taken to avoid deep saturation of output switch. The resulting switch-off time may be adversely affected. In a darlington configuration the following output driver condition is suggested:

$$\text{Forced } \beta \text{ of output current switch} = I_{COUTPUT} / (I_{CDRIVER} - 1 \text{ mA}^{(a)}) \geq 10$$

4 Start-up voltage is the minimum power supply voltage at which the internal oscillator begins to work.

Note: V_{SAT} = Saturation voltage of the output switch

V_F = Forward voltage drop of the output rectifier

The following power supply characteristics must be chosen:

V_{IN} = Nominal input voltage

V_{OUT} = Desired output voltage, $|V_{OUT}| = 1.25 (1 + R_2/R_1)$

I_{OUT} = Desired output current

f_{MIN} = Minimum desired output switching frequency at the selected values of V_{IN} and I_O

V_{RIPPLE} = Desired peak to peak output ripple voltage. In practice, the calculated capacitor value will and to be increased due to its equivalent series resistance and board layout. The ripple voltage should be kept to a low value since it will directly affect the line and load regulation.

7 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
